

# PLENUM SLOTS

## Fixed Vane Supply FVPS

FVPS

STEEL  
PLENUM  
ALUMINUM  
FACE

The FVPS plenum slot supply diffuser is designed to blend in with the aesthetics of a typical ceiling grid system. The aluminum face is painted white to match standard ceiling systems and ensure a clean appearance. The fixed blade pattern controller delivers optimal performance whether at minimum or maximum airflow. Diffuser endcaps are offset which allows the face to align flush with ceiling grids. The edges of the diffuser face are designed to allow ceiling tiles to rest on the diffuser without the need for additional T-bars. The plenum can be detached from the diffuser face and reversed to change inlet direction.

### FEATURES

- Removable plenum allows inlet direction to be reversed
- Aluminum extruded face is painted white to match standard ceiling systems
- Fixed blade pattern controller provides tight blanket of air across ceiling
- Standard nominal lengths: 24", 36", 48" and 60"
- Available in 1-slot, 2-slot, 3-slot and 4-slot configurations
- Available in 1-way or 2-way pattern
- Steel construction with aluminum face
- The FVPS is designed for standard Lay-in T-Bar ceiling systems
- Standard finish is White (WH) exposed surfaces

### ACCESSORIES

- Plaster Frame (PF-F) for sheetrock and plaster ceilings
- Cross Notch (CN)
- 3/8" thick fiber free insulation along length of plenum (endcaps not insulated)
