

AIGR Suggested Specification:

Round supply grilles shall be Tuttle and Bailey model AIG-R. Grilles shall provide airflow as specified on plans. Grilles shall be furnished with a rolled margin capable of being mounted directly to either a finished wall or exposed spiral duct. Nozzle grilles and rectangular grilles shall not be accepted.

The grilles shall be capable of blade deflections both parallel to the mounting surface and between 0° and 22.5° perpendicular to the mounting surface depending on unit size.

Grille construction shall consist of heavy gauge aluminum. The grille shall employ individually adjustable blade tensioners to hold the grille setting under normal operating and installation conditions.

The finish shall be either mill (ML) or Tuttle and Bailey white (WH).
