NOTES:

- Each fan curve depicts the actual performance for the relative motor tap without any additional fan balance adjustment. Actual specified capacities which fall below a particular fan curve (LO, MD, or HI) can be obtained by adjustment of the electronic fan speed controller. Selections can be made anywhere in the non-shaded area. Terminals equipped with a hot water coil require the addition of the coil pressure drop and the specified E.S.P. prior to making a fan selection.
- Terminals with Electric Heat (Model TVL-EH) require a minimum of 0.1" w.g. downstream pressure.
