NOMENCLATURE

The Model Number denotes the following characteristics of the unit:

Introduction

YORK *Millennium®* Air Cooled Screw Liquid Chillers

YORK *Millennium* Air Cooled Screw Compressor machines are the state-of-the-art in air-cooled chillers, providing chilled fluids for all air conditioning applications. Completely self-contained and designed for outdoor installation, these chillers employ new, low noise, energy efficient, serviceable, semi-hermetic screw compressors designed and manufactured specifically for this new product line. These compressors, with reliable twin-screw technology, are ideally matched to evaporators and condensers optimally configured for superior heat transfer and unit efficiency. Condenser coils are arranged to maximize airflow using full airfoil, high efficiency, low noise fans driven by low energy motors. The screw compressors, high efficiency evaporator, enhanced heat transfer condensers, and weather tight power and microprocessor control centers are mounted on a bolted, fully galvanized and powder painted, all steel base, for unsurpassed reliability and performance.

Specifications

These YORK air cooled chillers are shipped as a complete factory package. Each unit is completely assembled with all interconnecting refrigerant piping and internal wiring, ready for field installation:

COMPLETE FACTORY PACKAGE

- Each compressor is installed on its own independent refrigerant circuit, which is factory pressure tested, evacuated, then fully charged with refrigerant and oil.
- After assembly, an operational test is performed with water flowing through the cooler to ensure each circuit operates correctly.
- Cabinet and base frame are constructed of formed heavy gauge, galvanized steel.
- All external structural parts are covered with architecturally neutral "Desert Sand" (Munsell #10YR6-2) baked-on enamel powder paint. This provides a finish which, when subjected to ASTM B117, 500 hour, 5% salt spray conditions, shows breakdown of less than $\frac{1}{8}$ " either side of a scribed line (equivalent to ASTM D1654 rating of "6").
- Design is in accordance with applicable sections of ASME Pressure Vessel Code, NFPA 70 (National Electrical Code), U.L. and cU.L. Standards, and ASHRAE/ANSI-15 Safety Code for Mechanical Refrigeration.
- Units are Rated and Certified in accordance with ARI Standard 550/590-98.
- All exposed power wiring routed through liquid-tight, non-metallic conduit.

SEMI-HERMETIC YORK SCREW COMPRESSORS

- An ideal synergy of expertise, sister division YORK Refrigeration Compressor Engineers as integral members on YORK Engineered Systems' Chiller Design Team, has resulted in a world class compressor with unequaled performance.
- Continuous function, microprocessor controlled, 3-way proportional Capacity Control Valve provides regulated output pressure independent of valve input pressure for a stable, smooth, and precise match of compressor capacity to cooling load to 10% of chiller capacity.
- Automatic spring return of capacity control valve to minimum load position ensures compressor starting at minimum motor load. Internal discharge check to prevent rotor backspin upon shut-down.
- Acoustically tuned, internal discharge gas muffler eliminates objectionable noise at the source, while optimizing flow for maximum performance.

- Reliable suction gas cooled, high efficiency, accessible hermetic motor with APT2000 type magnet wire and redundant overload protection using both thermistor and current overload protection.
- Suction gas screen and serviceable, 0.5 micron full flow oil filter within the compressor housing.
- Some models equipped with tuned port economizer as appropriate for enhanced capacity and superior efficiency.
- Cast iron compressor housing precisely machined for optimal clearances and superb efficiency. Entire compressor, from suction to discharge has a Design Working Pressure of 450 PSIG (31 bar).
- 350W compressor body cartridge heater.

CONDENSER SECTION

- Condenser Fans with low noise, full airfoil cross section for maximum efficiency, statically and dynamically balanced for low vibration operation, and positioned in extended, formed steel orifices for low sound and maximum efficiency.
- Condenser fan motors are high efficiency, direct drive, 6-pole, 3-phase, Class-"F", current overload protected, totally enclosed (TEAO) type with double sealed, permanently lubricated, ball bearings.
- Fin and tube condenser coils of seamless, internally enhanced, high condensing coefficient, corrosion resistant copper tubes arranged in staggered rows and mechanically bonded to corrosion resistant aluminum alloy fins with full height fin collars. Design working pressure is 450 PSIG (31 bar).

EVAPORATOR

- High efficiency, direct-expansion type cooler with refrigerant in tubes and chilled liquid through the baffled shell. Independent circuits provided for each compressor.
- Design working pressure of the shell waterside is 150 PSIG (10.3 bar), and 350 PSIG (24 bar) for the refrigerant side. Constructed and tested in accordance with applicable sections of ASME Pressure Vessel Code, Section VIII, Division (1). Water side exempt per paragraph U-1, (c), (6). Other codes, such as German TÜV, also available for global customers.
- Water baffles fabricated from galvanized steel to resist corrosion. Removable heads allow access to internally-enhanced, seamless, copper tubes. Water vent and drain connections included.
- Cooler equipped with thermostatically controlled heater for protection to -20°F (-29°C) ambient, and insulated with $\frac{3}{4}$ " (19mm) flexible, closed-cell foam ($k = 0.25$).

REFRIGERANT CIRCUIT

- Independent refrigerant circuits per compressor, each using copper refrigerant pipe formed on computer controlled bending machines. This eliminates over 60% of system piping brazed joints as compared to designs that use fittings, resulting in a highly reliable and leak resistant system.
- Liquid line components include: manual shut-off valve with charging port, high adsorption removable core filter-drier, solenoid valve, sight glass with moisture-indicator, and reliable thermostatic expansion valves.
- Economizer is a refrigerant to refrigerant, compact plate-type heat exchanger to maximize chiller capacity and efficiency by subcooling liquid refrigerant delivered to the cooler expansion valve. Constructed of corrosion resistant stainless steel plates formed to induce turbulent flow and enhance heat transfer, then oven brazed and pressure tested for reliability. Designed and constructed in accordance with ASME and TÜV for 450 PSIG (31 bar). U.L./CSA listed.
- Suction and discharge lines provided with manual compressor shutoff service valves. Suction line equipped with closed-cell insulation.
- Oil separators with Design Working Pressure of 450 PSIG (31 bar) and U.L. listing are high efficiency, augmented aerosol impingement type to maximize oil extraction without fragile media to break down. An oil charging valve is included with each refrigerant circuit.
- Oil cooling provided by dedicated air cooled finned tube type heat exchanger located in the condenser section of the machine.

MICROPROCESSOR CONTROLS

- Controls housed in a powder painted steel cabinet enclosure, equivalent to NEMA 3R/12 (IP55), with hinged, latched, and gasket sealed, door.
- Liquid crystal 40 character display with text provided on two lines and light emitting diode backlighting for outdoor viewing.
- Color coded, 32 button, sealed keypad with sections for Display, Entry, Setpoints, Clock, Print, Program and Unit On/Off.
- Standard controls include: brine chilling or thermal storage, automatic pump down, run signal contacts, demand load limit from external building automation system input, remote liquid temperature reset input, unit alarm contacts, evaporator pump control, automatic reset after power failure, automatic system optimization to match operating conditions, software stored in non-volatile memory (EPROM) to eliminate chiller failure due to AC power failure. Programmed setpoints retained in lithium battery backed RTC memory for a minimum 5 years.

- **Display** – In English ($^{\circ}$ F and PSIG) or Metric ($^{\circ}$ C and Bars) units, and for each circuit:

- ◆ Return and leaving chilled liquid, and ambient temperature.
- ◆ Day, date and time. Daily start/stop times. Holiday and Manual Override status.
- ◆ Compressor operating hours and starts. Automatic or manual lead/lag. Lead compressor identification.
- ◆ Run permissive status. No cooling load condition. Compressor run status.
- ◆ Anti-recycle timer and anti-coincident start timer status per compressor.
- ◆ Suction (and suction superheat), discharge, and oil pressures and temperatures per System.
- ◆ Percent full load compressor motor current per phase and average per phase. Compressor capacity control valve input steps.
- ◆ Cutout status and set-points for: supply fluid temperature, low suction pressure, high discharge pressure and temperature, high oil temperature, low and high ambient, phase rotation safety, and low leaving liquid temperature.
- ◆ Unloading limit set-points for high discharge pressure and compressor motor current.
- ◆ Liquid pull-down rate sensitivity (0.5 $^{\circ}$ F to 5 $^{\circ}$ F/minute in 0.1 $^{\circ}$ F increments).
- ◆ Status of: evaporator heater, condenser fans, load and unload timers, chilled water pump.
- ◆ “Out of range” message.
- ◆ Up to 6 fault shut down conditions.
- ◆ Standard Display Language is English, with Options for: French, German, Italian, and Spanish.
- **Entry** – Enter set point changes, cancel inputs, advance day, change AM/PM.
- **Setpoints** – Chilled liquid temperature, chilled liquid range, remote reset temperature range.
- **Clock** – Time, daily or holiday start/stop schedule, manual override for servicing.
- **Print** – Operating data or system fault shutdown history for last six faults, and software version. Prints out through an RS-232 port via a separate printer (by others).

• **Program** –

- ◆ Low leaving liquid temperature cutout, 300 to 600 second anti-recycle timer, lag compressor start time delay, and average motor current unload point. Liquid temperature setpoint reset signal from **YORK ISN** or building automation system (by others) via:

Specifications (Continued)

- ❖ Pulse width modulated (PWM) input for up to 40°F (22°C) total reset as standard.
- ❖ *Optional* Building Automation System interface input card for up to 40°F (22°C) reset using a: 4 to 20 milliamp, 0 to 10VDC input, or discrete reset input. **[NOTE:** The Standard Micro Panel can be directly connected to a YORK ISN Building Automation System via the standard onboard RS485 communication port. This Option also provides open system compatibility with other communications networks (BACNET™ & LONMARK™) via interface through standard onboard 485 or 232 port and an external **YorkTalk Translator.**]
- ❖ Additional functions (password protected) for programming by a qualified service technician:
 - ❖ Cut-outs for low and high ambient, low suction pressure, high discharge pressure, high oil temperature.
 - ❖ Refrigerant type.
 - ❖ High discharge pressure unload setpoint.
 - ❖ Fan control discharge pressure set point.
 - ❖ Fan ON/OFF pressure differential.
 - ❖ Compressor motor current percent limit.
- ❖ The Standard unit controls permit operation down to 0°F (-18°C) outdoor ambient temperature.

POWER PANEL

- Power panel housed in NEMA 3R/12 (IP55) rain/dust tight, powder painted steel cabinets with hinged, latched, and gasket sealed outer doors equipped with wind struts for safer servicing. Two motor control center cabinets are provided, with independent doors and separated by a steel barrier panel.
- Current transformers sense each phase, as an input to the microprocessor, to protect compressor motors from damage due to: low input current, high input current, unbalanced current, single phasing, phase reversal, and compressor locked rotor.
- Control circuit transformer provides 115V / 1Ø power to the unit control system. Includes factory primary wiring from lockable disconnect on panel door separate from the motor control centers, and secondary wiring supply to the 24V, fused Microprocessor panel transformer.
- Individual fan motor contactors & external overloads per condenser fan motor.
- Exposed compressor and fan motor power wiring routed through liquid tight conduit.

Accessories and Options

- **CONTROL CIRCUIT TERMINAL STRIP** – Provides power input terminals for field provided power input in lieu of factory mounted control circuit transformer. 115V, 1Ø Control Circuit Power Terminal Strip located in the Microprocessor Panel to accept a field provided control power circuit with appropriate branch circuit protection in accordance with applicable Local and National codes. Provides unit control circuit power, including supply to the 24V, fused Microprocessor panel transformer.
- **BUILDING AUTOMATION SYSTEM (BAS) INTERFACE** – Provides means to reset the leaving chilled liquid temperature or percent full load amps (current limiting) from the BAS (Factory-mounted):
 - ◆ Printed circuit board to accept 4 to 20 milliamp, 0 to 10VDC, or dry contact closure input from the BAS.
 - ◆ A YORK ISN Building Automation System can provide a Pulse Width Modulated (PWM) signal direct to the standard control panel via the standard on-board RS485 port.
- **PRIMARY CHILLER POWER CONNECTIONS** – See Electrical Data on pages 80 through 91 for specific voltage and options availability. Separate external branch circuit protection and disconnecting means must be supplied by others in accordance with applicable Local and National codes. (Factory-mounted)
 - ① **Multiple Point Supply** – **Standard** field power wiring connection on all models is Multiple Point Power Connection to factory provided Terminal Blocks. Two field supplied electrical power circuits with appropriate branch circuit protection provide power to each of two motor control center cabinets, located adjacent to each other at one end of the chiller. Each cabinet contains starter elements for one or two compressors and their associated fan motor starters.
 - Optional** to the Terminal Blocks for field power connection are Non-Fused Disconnects with external lockable handles, or (on two compressor machines only) Circuit Breakers with external lockable handles. Also **Optional** (on 3 & 4 compressor machines equipped with multiple point power supply) are individual system circuit breakers per each compressor with external lockable handles.
 - ② **Single-Point Supply** – **Optional** to the Multiple Point power connection configurations are Single-Point Supply arrangements. A wide variety of these single-point **Options** are offered to satisfy most any customer connection requirement:
 - ◆ **Single-Point with Individual System Breakers** – These options consist of field connection to either a unit mounted Terminal Block, or a Non-Fused
- Disconnect Switch with external, lockable handle (in compliance with Article 440-14 of N.E.C., to isolate unit power supply for service). Factory wiring is provided from the Terminal Block or Disconnect Switch to factory supplied Individual System Circuit Breakers with external, lockable handles in each of the two compressor motor control centers.
- ◆ **Single-Point Supply** – Also optional (on two compressor machines only) are Single-Point Supply configurations for field connection of a single electrical circuit to: Terminal Block, Non-Fused Disconnect Switch with lockable external handle (in compliance with Article 440-14 of N.E.C., to isolate unit power supply for service), or Circuit Breaker with lockable external handle. Factory wiring is provided from the Terminal Block, Disconnect Switch, or Breaker directly to the starter components in each of the two compressor motor control centers.
- **STAR (WYE)-DELTA COMPRESSOR MOTOR STARTER** – Provides smooth starting and approximately 65% reduced inrush current compared to across-the-line type start. Two compressor units equipped with any of the Single-Point Power connection options and Star-Delta starters must also be equipped with Individual System Circuit Breakers option. Three and four compressor units with Star-Delta starters must also include Individual System Circuit Breakers option. (Factory-mounted) See Electrical Data (pages 80 - 91) for availability and coordination with individual system short circuit protection.
- **CONDENSER COIL PROTECTION** – Standard condenser coil construction materials include aluminum fins, copper tubes, and galvanized tube supports for generally good corrosion resistance. However, these materials are not adequate for all environments. The system designer can take steps to inhibit coil corrosion in harsh applications and enhance equipment life by choosing from these options based on project design parameters and related environmental factors. For additional application recommendations refer to Form 150.12-ES1. (Factory-mounted)
- ◆ **Black Fin Condenser Coils** – Condenser coils constructed using black epoxy coated aluminum fin stock for corrosion resistance comparable to copper fin coils in typical seashore locations. Either this or phenolic (below) recommended for units installed in coastal environments.
- ◆ **Phenolic Coated Condenser Coils** – Completed condenser coil assemblies are covered with a cured phenolic coating. Probably the best choice for seashore or where salt spray may hit the fins,

Accessories and Options (Continued)

and other corrosive applications except: strong alkalies, oxidizers, and wet bromine, chlorine, and fluorine in concentrations greater than 100 ppm.

- ◆ **Copper Fin Condenser Coils** – Coils constructed with corrosion resistant copper fins. Not recommended in areas where units may be exposed to acid rain.
- **DX COOLER OPTIONS**
 - ◆ **300 PSIG (21 bar) Waterside Design Working Pressure** – The DX Cooler Waterside is designed and constructed for 300 PSIG (21 bar) working pressure. (Factory-mounted)
 - ◆ **1-½" Insulation** – Double thickness insulation provided for enhanced efficiency.
 - ◆ **Optional Pressure Safety Code Construction** – Chiller construction in accordance with Pressure Safety Codes of many countries are available. Cooler, oil separators, relief valves, safeties, or other operating devices designed or selected as required by the indicated Country. Common configurations include: **USA (ASME, ASHRAE-15), Germany (TÜV), France (CODAP), Italy (ISPESL), and Poland (UDT)**. Some available only on 50 Hz units. Consult with your YORK representative to ensure compliance with job requirements (Factory-mounted).
 - ◆ **Flange Accessory** – Consists of raised face flanges to convert grooved water nozzles to flanged cooler connections. Includes companion flanges. (Field mounted).
- **REMOTE DX COOLER** – Includes: ① Main condensing unit /less cooler, refrigerant, and liquid line mechanical devices; ② Separate, insulated cooler; and ③ Field Accessory Kit (per refrigerant circuit: filter-drier shell and cores, liquid line solenoid valve, sight glass with moisture indicator, and Thermostatic Expansion Valve; also entering and leaving water temperature transducers) for use in the interconnecting system piping and wiring as designed and installed by others. Field connections made at the condensing unit liquid stub (after the sub-cooler, or the economizer if the system is so equipped) and at the compressor suction stub. Condensing Unit and DX Cooler ships with a nitrogen holding charge. System erection, leak testing, refrigerant, and charging are by others. See Engineering Supplement 201.10-ES2 for additional information. Remote cooler configuration available with R-22 only. **NOTE:** Remote DX Cooler applications are outside the scope of ARI Standard – 550/590.
- **FLOW SWITCH ACCESSORY** – Vapor-proof SPDT, NEMA 4X switch, 150 PSIG (10.3 bar) DWP, -20°F to 250°F (-29°C to 121°C), with 1" NPT (IPS) connection for upright mounting in horizontal pipe. (This flow switch or equivalent must be furnished with each unit). (Field mounted)
- **VIBRATION ISOLATION**
 - ◆ **Neoprene Isolation** – Recommended for normal installations. Provides very good performance in most applications for the least cost. (Field mounted)
 - ◆ **1" Spring Isolators** – Level adjustable, spring and cage type isolators for mounting under the unit base rails. 1" nominal deflection may vary slightly by application. (Field mounted)
 - ◆ **2" Seismic Spring Isolators** – Restrained Spring-Flex Mountings incorporate a rugged welded steel housing with vertical and horizontal limit stops. Housings designed to withstand a minimum 1.0g accelerated force in all directions to 2". Level adjustable, deflection may vary slightly by application. (Field mounted)
- **ALTERNATIVE CHILLED FLUID APPLICATIONS**

Standard water chilling application range is 40°F to 55°F (4°C to 13°C) Leaving Chilled Water Temperature. To protect against nuisance safety trips below 40°F (4°C) and reduce the possibility of cooler damage due to freezing during chiller operation, the unit Micro-Processor will automatically unload the compressors at abnormally low suction temperature (pressure) conditions, prior to a safety shut down.

 - ◆ **Process Brine Option** – Process or other applications requiring chilled fluid below 40°F (4°C) risk water freezing in the evaporator, which is typically overcome with antifreeze. For these applications, the chiller performance rating incorporates 'brine' (typically ethylene or propylene glycol solution), and the system design Leaving Chilled Fluid Temperature must be provided on the order form to ensure proper factory configuration.
 - ◆ **Thermal Storage Option** – Thermal Storage requires special capabilities from a chiller, including the ability to 'charge' an ice storage tank, then possibly automatically reset for operation at elevated Leaving Chilled Fluid Temperatures as required by automatic building controls. The Thermal Storage Option provides Ice Storage duty Leaving Chilled Fluid setpoints to 15°F minimum (-10°C minimum) during charge cycle, with a Reset range to normal supply fluid temperature.
- **REMOTE CONTROL PANEL AND WALL ADAPTER** – See Form 201.00-SG11 for more information. (Only one of the following options can be offered on a unit at one time: BAS, Remote Control Panel or Multi-Unit Sequence Control). (Factory-mounted).

- **MULTI-UNIT SEQUENCING** – A separate Sequencing Control Center is provided to handle sequencing control of up to eight chillers in parallel based on mixed liquid temperature (interconnecting wiring by others). *See Form 150.00-SG2 for more information.* (*Only one of the following options can be offered on a unit at a time: BAS, Remote Control Panel or Multi-unit Sequence Control.*) (*Factory-mounted*).

- **UNIT ENCLOSURES –**

- ◆ **Wire Panel Enclosure (Full Unit)** – UV stabilized black polyvinylchloride coated, heavy gauge, welded wire mesh guards mounted on the exterior of the unit. Protects condenser coil faces and prevents unauthorized access to refrigerant components (compressors, pipes, cooler, etc.), yet provides free air flow. This can cut installation cost by eliminating the need for separate, expensive fencing. (*Factory-mounted*)
- ◆ **Louvered Panel Enclosure (Full Unit)** – Heavy gauge louver panels, galvanized and painted just as the main unit cabinet, provide liberal free air flow area. Cover coils and around the bottom of the unit to protect condenser coils, visually screen mechanical elements, and prevent unauthorized access to refrigerant components. (*Factory-mounted*)
- ◆ **Louvered Panels (Condenser Coil Only)** – Louvered panels are mounted over the exterior condenser coil faces on the sides of the unit to visually screen and protect coils. (*Factory-mounted*)
- ◆ **Louvered (Condensers) / Wire (Mechanicals)** – Louvered panels mounted over the exterior condenser coil faces, and heavy gauge welded wire

mesh guards mounted around the bottom of the unit. Visually screens and protects coils, and prevents unauthorized access to refrigerant components. (*Factory-mounted*)

- **HIGH STATIC FANS –**

Fans and motors suitable for High External Static conditions to 0.4 inches of water (100Pa). Since these require higher power motors and therefore slightly reduce chiller efficiency, select only if the installation conditions will impose additional air flow resistance resulting from such things as field installed: ducts, filters, sound enclosures, or similar obstructions to airflow. Contact the factory for performance or electrical implications.

- **SOUND REDUCTION OPTIONS –**

Standard unit includes acoustically tuned, internal discharge gas muffler to eliminate objectionable compressor noise. For additional sound reduction, one or both options may be employed by the system designer as normally generated machine noise is considered in the overall project design. See Form 201.18-ES1 for additional information.

- ◆ **Low Speed Fans** – With this option, the basic chiller is equipped with 8-pole condenser fan motors in lieu of the standard 6-pole motors, plus special fans matched to these optional slower motors to retain appropriate airflow. The net result is reduced fan generated noise with no adverse effect on the chiller capacity or efficiency performance.

- ◆ **Acoustic Silencer Kit** – Acoustical enclosures surrounding perimeter of unit to attenuate compressor noise.

NOTES:

1. kW = Compressor Input Power
2. EER = Chiller EER (includes power from compressors, fans, and control panels 0.8 kW)
3. LCWT = Leaving Chilled Water Temperature
4. Ratings based on 2.4 GPM cooler water per ton
5. Rated in accordance with ARI Standard 550/590-98
6. Shaded ratings certified in accordance with ARI Standard 550/590-98 up to 200 tons.

NOTES:

1. kW = Compressor Input Power
2. EER = Chiller EER (includes power from compressors, fans, and control panels 0.8 kW)
3. LCWT = Leaving Chilled Water Temperature
4. Ratings based on 2.4 GPM cooler water per ton
5. Rated in accordance with ARI Standard 550/590-98
6. Certified in accordance with the ARI Water-Chilling Packages Using the Vapor Compression Cycle Certification Program, which is based on ARI Standard 550/590.

NOTES:

1. kW_o = Unit kW Cooling Capacity Output
2. kW_i = Compressor Input Power
3. EER = Coefficient of performance (includes power from compressors, fans, and control panel's 0.8 kW).
4. LCWT = Leaving Chilled Water Temperature
5. Ratings based on 0.15 L/s cooler water per ton.
6. Rated in accordance with ARI Standard 550/590.

POWER: MULTIPLE POINT WITH TERMINAL BLOCKS

NOTES:

- Placement on a level surface free of obstructions (including snow, for winter operation) or air recirculation ensures rated performance, reliable operation and ease of maintenance. Site restrictions may compromise minimum clearances indicated below, resulting in unpredictable air flow patterns and possible diminished performance. YORK's unit controls will optimize operation without nuisance high pressure safety cutout; however, the system designer must consider potential performance degradation. Access to the unit control center assumes the unit is no higher than on spring isolators. Recommended minimum clearances: Side to wall - 6'; rear to wall - 6'; control panel end to wall - 4'; top - no obstructions allowed; distance between adjacent units - 10'. No more than one adjacent wall may be higher than the unit.

NOTES:

- Placement on a level surface free of obstructions (including snow, for winter operation) or air recirculation ensures rated performance, reliable operation and ease of maintenance. Site restrictions may compromise minimum clearances indicated below, resulting in unpredictable air flow patterns and possible diminished performance. YORK's unit controls will optimize operation without nuisance high pressure safety cutout; however, the system designer must consider potential performance degradation. Access to the unit control center assumes the unit is no higher than on spring isolators. Recommended minimum clearances: Side to wall - 6'; rear to wall - 6'; control panel end to wall - 4'; top - no obstructions allowed; distance between adjacent units - 10'. No more than one adjacent wall may be higher than the unit.

Electrical Data

MULTIPLE POINT POWER SUPPLY CONNECTION - 2 COMPRESSOR UNITS (SEE FIG. 1)

(Each of Two Field Provided Power Supply Circuits individually protected with Branch Circuit Protection.

Field Connections to Factory provided Terminal Block (Std), Disconnects (Opt), or Individual System Breakers (Opt) in each of the two Motor Control Centers.)

Electrical Data (Continued)

MULTIPLE POINT POWER SUPPLY CONNECTION - 3 & 4 COMPRESSOR UNITS (SEE FIG. 5 or FIG. 6)

(Two Field Provided Power Supply Circuits to the Chiller. Field Connections to Factory provided Terminal Block (Std) or Disconnects (Opt) in the Options Panel, or Individual System Circuit Breakers (Opt¹⁰) in each of the two Motor Control Centers.)

NOTES (for pages 80 - 91*)

1. Minimum circuit ampacity (MCA) is based on 125% of the rated load amps for the largest motor plus 100% of the rated load amps for all other loads included in the circuit, per N.E.C. Article 430-24. If a Factory mounted Control Transformer is provided, add the following to the system #1 MCA values in the YCAS Tables: -17, add 15 amps; -28, add 12 amps; -40, add 7 amps; -46, add 6 amps; -58, add 5 amps.
2. The recommended disconnect switch is based on a minimum of 115% of the summation rated load amps of all the loads included in the circuit, per N.E.C. 440 - 12A1.
3. Minimum recommended fuse size is based on 150% of the largest motor RLA plus 100% of the remaining RLAs. Minimum fuse rating = $(1.5 \times \text{largest compressor RLA}) + \text{other compressor RLAs} + (\# \text{ fans} \times \text{each fan motor FLA})$.
4. Maximum dual element fuse size is based on 225% maximum plus 100% of the rated load amps for all other loads included in the circuit, per N.E.C. 440-22. Maximum fuse rating = $(2.25 \times \text{largest compressor RLA}) + \text{other compressor RLAs} + (\# \text{ fans} \times \text{each fan motor FLA})$.
5. Minimum recommended circuit breaker is 150% maximum plus 100% of rated load amps included in the circuit. Minimum circuit breaker rating = $(1.5 \times \text{largest compressor RLA}) + \text{other compressor RLAs} + (\# \text{ fans} \times \text{each fan motor FLA})$.
6. Maximum circuit breaker is based on 225% maximum plus 100% of the rated load amps for all loads included in the circuit, per circuit, per U.L. 1995 Fig. 36.2. Maximum circuit breaker rating = $(2.25 \times \text{largest compressor RLA}) + \text{other compressor RLAs} + (\# \text{ fans} \times \text{each fan motor FLA})$.
7. The Incoming Wire Range is the minimum and maximum wire size that can be accommodated by unit wiring lugs. The (1), (2), or (3) indicate the number of termination points or lugs which are available per phase. Actual wire size and number of wires per phase must be determined based on ampacity and job requirements using N.E.C. wire sizing information. The above recommendations are based on the National Electric Code and using **copper conductors** only. Field wiring must also comply with local codes.
8. A ground lug is provided for each compressor system to accommodate field grounding conductor per N.E.C. Article 250-54. A control circuit grounding lug is also supplied. Incoming ground wire range is #6 - 350 MCM.
9. The field supplied disconnect is a "Disconnecting Means" as defined in N.E.C. 100.B, and is intended for isolating the unit from the available power supply to perform maintenance and troubleshooting. This disconnect is not intended to be a Load Break Device.
10. Two-Compressor machines with single-point power connection, and equipped with Star (Wye)-Delta Compressor motor start must also include factory-provided individual system circuit breakers in each motor control center. All 3 & 4 Compressor machines equipped with Star-Delta compressor motor start must also include factory-provided individual system circuit breakers in each motor control center.
11. Consult factory for Electrical Data on units equipped with "High Static Fan" option. High Static Fans are 3.8 kW each.
12. FLA for "Low Noise Fan" motors: 200V = 8.0A, 230V = 7.8A, 380V = 4.4A, 460V = 3.6A, 575V = 2.9A.
13. Group Rated breaker must be HACR type for cUL Machines.

Typical Control Wiring – 2-Compressor Units

Application Data

UNIT LOCATION

The YCAS chillers are designed for outdoor installation. When selecting a site for installation, be guided by the following requirements:

1. Installation sites may be either on a roof or on ground level. (See FOUNDATION)
2. Select a place having an adequate supply of fresh air for the condensers. Recommended clearances for all units are shown on the DIMENSIONS pages.
3. Avoid locations near windows or structures where normal operating sounds may be objectionable.
4. The standard condenser fans are propeller-type and are not recommended for use with ductwork, filters or other nuisance in the condenser air stream.
5. When it is desirable to surround the unit(s), it is recommended that the screening be able to pass the required chiller CFM without exceeding 0.1" external static pressure.
6. Protection against corrosive environments is available by supplying the units with either copper fins, or cured phenolic or epoxy-coating on the condenser coils. Either the cured phenolic or epoxy-coated coils should be utilized with any units being installed at the seashore, or where salt spray may hit the units, or where acid rain is prevalent (copper condenser coils are not recommended where they may be exposed to acid rain).
7. On installations where winter operation is intended and snow accumulations are expected, additional elevation must be provided to insure normal condenser air flow.

FOUNDATION

The unit should be mounted on a flat and level foundation, ground or roof, capable of supporting the entire operating weight of the equipment. Operating weights are given in the PHYSICAL DATA tables.

Roof Locations – Adequate structural strength to safely support the entire weight of the unit and service personnel must be provided. Care must be taken not to damage the roof during installation. If the roof is "bonded", consult building contractor or architect for special installation requirements. Roof installations should incorporate the use of spring-type isolators to

minimize the transmission of vibration into building structure. Additional support should be provided to the roof at the spring-isolator locations.

Ground Locations – Units must be installed on a substantial base that will not settle and cause strain on the refrigerant lines, resulting in possible leaks. A one-piece concrete slab, with footers extending below the frost line, is recommended. The slab should not be tied to the main building foundation as noises will telegraph.

Mounting holes (5/8") are provided in the base rails for bolting the unit to its foundation. See DIMENSIONS for location of the mounting holes.

For ground installations, precautions should be taken to protect the unit from tampering by, or injury to, unauthorized persons. Fasteners on access panels will prevent casual tampering; however, further safety precautions, such as unit enclosure options, a fenced-in enclosure, or locking devices on the panels may be advisable. Check local authorities for safety regulations.

CHILLED LIQUID PIPING

The chilled liquid piping system should be laid out so that the circulating pump discharges into the cooler. The inlet and outlet cooler-liquid connections are given in DIMENSIONS. Hand stop valves are recommended for use in all lines to facilitate servicing. Drain connections should be provided at all low points to permit complete drainage of the cooler and system piping.

A strainer (40 mesh) is recommended for use on the INLET line to the cooler, and must be in place at initial operation of the water pumps.

Pressure-gauge connections are recommended for installation in the inlet and outlet water lines. Gauges are not provided with the unit and are to be furnished by others.

Chilled liquid lines exposed to the weather should be wrapped with a supplemental heater cable and insulated, or glycol should be added to the chilled liquid to protect against freezing if low-ambient periods are expected.

A flow switch is available as an accessory on all units. A flow switch must be installed in the leaving water piping of the cooler and must not be used to start and stop the unit.

Guide Specifications

PART 1 — GENERAL

1.01 SCOPE

- A. The requirements of the General Conditions, Supplementary Conditions, Division 1, and Drawings apply to all Work herein.
- B. Provide Microprocessor controlled, twin-screw compressor, air-cooled, liquid chillers of the scheduled capacities as shown and indicated on the Drawings, including but not limited to:
 - 1. Chiller package
 - 2. Charge of refrigerant and oil
 - 3. Electrical power and control connections
 - 4. Chilled water connections

1.02 QUALITY ASSURANCE

- A. Products shall be Designed, Tested, Rated and Certified in accordance with, and installed in compliance with applicable sections of the following Standards and Codes:
 - 1. ANSI/ASHRAE Standard 15 – *Safety Code for Mechanical Refrigeration*
 - 2. ANSI/NFPA Standard 70 – *National Electrical Code (N.E.C.)*.
 - 3. ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
 - 4. ARI Standard 550/590 – *Centrifugal and Rotary Screw Water Chilling Packages*.
 - 5. Conform to Underwriters Laboratories (U.L.) for construction of chillers and provide U.L./cU.L. Listing label.
 - 6. Manufactured in facility registered to ISO 9002.
- B. Factory Test: Chiller shall be pressure-tested, evacuated and fully charged with refrigerant and oil, and shall be factory operational run tested with water flowing through the vessel.
- C. Warranty: Manufacturer shall Warrant all equipment and material of its manufacture against defects in workmanship and material for a period of one year from date of initial start-up or eighteen (18) months from date of shipment, whichever occurs first.

1.03 DELIVERY AND HANDLING

- A. Unit shall be delivered to job site fully assembled, and charged with refrigerant and oil by the Manufacturer.
- B. Unit shall be stored and handled per Manufacturer's instructions.

PART 2 — PRODUCTS

2.01 CHILLER MATERIALS AND COMPONENTS

- A. General: Install and commission, as shown on the schedules and plans, factory assembled, charged, and tested air cooled screw compressor chiller(s) as specified herein. Chiller shall be designed, selected, and constructed using a refrigerant with Flammability rating of "1", as defined by ANSI/ASHRAE STANDARD-34 *Number Designation and Safety Classification of Refrigerants*. Chiller shall include, but is not limited to: a complete system with not less than two independent refrigerant circuits, semihermetic twin screw compressors, direct expansion type evaporator, air-cooled condenser, refrigerant, lubrication system, interconnecting wiring, safety and operating controls including capacity controller, control center, motor starting components, and special features as specified herein or required for safe, automatic operation.
- B. Cabinet: External structural members shall be constructed of heavy gauge, galvanized steel coated with baked on powder paint which, when subject to ASTM B117, 500 hour, 5% salt spray test, yields minimum ASTM 1654 rating of "6".

2.02 COMPRESSORS AND MOTORS

- A. Compressors: Shall be direct drive, semihermetic, rotary twin-screw type, including: internal muffler, temperature actuated 'off-cycle' heater, rain-tight terminal box, internal discharge check, discharge and suction shut-off service valves, and precision machined cast iron housing. Design working pressure of entire compressor, suction to discharge, shall be 450 PSIG (31 bar). Compressor shall be U.L. listed.
- B. Motors: Refrigerant suction gas cooled two-pole accessible hermetic compressor motor, full suction gas flow through 0.006" maximum mesh screen, with inherent internal thermal overload protection and external current overload on all three phases. Motor stator shall employ APT2000 type magnet wire.
- C. Lubrication: External oil separators with no moving or fragile parts, 450 PSIG design working pressure, and UL listing. Refrigerant system differential pressure shall provide oil flow through service replaceable, 0.5 micron, full flow, cartridge type oil filter internal to compressor. Filter bypass, less restrictive media, or oil pump not acceptable.
- D. Capacity Control: Compressors shall start at minimum load position. Capacity control range from 100% to 10% of chiller full load using continuous function slide valves, and without hot gas bypass. Step unloading unacceptable. Provide Microprocessor controlled, output pressure regulating capacity control

Guide Specifications (Continued)

valve to command compressor capacity independent of control valve input pressure and balance compressor capacity with cooling load.

2.03 REFRIGERANT CIRCUIT COMPONENTS

Each independent refrigerant circuit shall include: liquid line shutoff valve with charging port, low side pressure relief device, removable core filter-drier, solenoid valve, sight glass with moisture indicator, thermostatic expansion valves, and flexible, closed-cell foam insulated suction line.

2.04 HEAT EXCHANGERS

A. Evaporator:

1. Direct expansion type with refrigerant inside high efficiency copper tubes, chilled liquid forced over the tubes by galvanized steel baffles. Independent refrigerant circuits per compressor.
2. Constructed, tested, and stamped in accordance with applicable sections of ASME pressure vessel code for minimum 350 PSIG (24 bar) refrigerant side design working pressure and 150 PSIG (10 bar) water side design working pressure.
3. Shell covered with $\frac{3}{4}$ " (19mm), flexible, closed-cell insulation, thermal conductivity of 0.26k ($[\text{BTU}/\text{HR}\cdot\text{Ft}^2\cdot{}^{\circ}\text{F}]/\text{in.}$) maximum. Water nozzles with grooves for mechanical couplings, and insulated by Contractor after pipe installation.
4. Provide vent and drain fittings, and thermostatically controlled heaters to protect to -20°F (-29°C) ambient in off-cycle.

B. Air Cooled Condenser:

1. Coils: Internally enhanced, seamless copper tubes, mechanically expanded into aluminum alloy fins with full height collars. Subcooling coil an integral part of condenser. Design working pressure shall be 450 PSIG (31 bar).
2. Fans: Shall be dynamically and statically balanced, direct drive, corrosion resistant glass fiber reinforced composite blades molded into low noise, full airfoil cross section, providing vertical air discharge from extended orifices for efficiency and low sound. Each fan in its own compartment to prevent cross flow during fan cycling. Guards of heavy gauge, PVC (polyvinyl chloride) coated or galvanized steel.
3. Fan Motors: High efficiency, direct drive, 6-pole, 3-phase, insulation class "F", current protected, Totally Enclosed Air-Over (TEAO), rigid mounted, with double sealed, permanently lubricated, ball bearings.

C. Refrigerant Economizer (when provided): Stainless steel plate type, oven brazed with copper, U.L./cUL Listed, 450 PSIG (31 bar) design working pressure.

2.05 CONTROLS

A. General: Automatic start, stop, operating, and protection sequences across the range of scheduled conditions and transients.

B. Control Circuit Transformer: Factory mounted with primary breaker having lockable, external handle, and 115V/10 secondary.

C. Microprocessor Enclosure: Rain and dust tight NEMA 3R/12 (IP55) powder painted steel cabinet with hinged, latched, and gasket sealed door.

D. Microprocessor Control Center:

1. Automatic control of compressor start/stop and load/unload, anti-coincidence and anti-recycle timers, automatic pump-down at start-up and shutdown, condenser fans, evaporator pump, evaporator heater, unit alarm contacts, run signal contacts, and chiller operation from 0°F to 125°F (-18°C to 52°) ambient. Automatic reset to normal chiller operation after power failure.

2. Setpoint Reset:

- a. Pulse Width Modulated (PWM) input to reset current unload setpoint downward via signal from external Energy Management System (EMS), maximum allowable reset programmable from microprocessor keypad.
- b. PWM input to reset the chilled liquid setpoint upward via signal from remote EMS, maximum allowable reset programmable from microprocessor keypad.

3. Software stored in non-volatile memory, with programmed setpoints retained in lithium battery backed real time clock (RTC) memory for minimum 5 years.

4. Forty character liquid crystal display, descriptions in English (or Spanish, French, Italian, or German), numeric data in English (or Metric) units. Sealed keypad with sections for Setpoints, Display, Entry, Print, Program, Clock, and Unit On/Off Switch.

5. Programmable Setpoints (within Manufacturer limits): display language; discharge pressure unload and cutout; low suction pressure cutout; low and high ambient cutouts; leaving chilled liquid temperature: setpoint, control range, and cutout; high motor current unload; anti-recycle time; lag compressor start; local or remote control; units of measure; compressor lead/lag; power failure restart (auto or manual), and maximum EMS-PWM reset temperature range.

- 6. Display Data: Chiller liquid return and leaving temperatures, ambient, lead compressor identification and lead/lag delay, clock and schedule, (variable) out of range, remote input indication, chilled liquid reset setpoint, leaving liquid pull-down rate setpoint, leaving liquid error (deviation from setpoint), and history data for last six shutdown faults. Compressor suction, discharge, and oil pressures and temperatures, suction and discharge superheats, percent of full-load motor current, operating hours, starts, and anti-recycle timer status. Status Messages for manual override, unit switch off, compressor run, run permissive, remote controlled shut down, no cooling load, daily/holiday shut down, anti-recycle/anti-coincident timer, high pressure low suction temperature limit.
 - 7. System Safeties: Shall cause individual compressor systems to perform auto-reset shut down; manual reset required after the third trip in 90 minutes. Includes: high discharge pressure or temperature, low suction pressure, high / low motor current, high pressure switch, high / low differential oil pressure, high oil temperature, and motor protector. Compressor motor protector shall protect against damage due to: low or high input current, phase reversal (reverse rotation), current unbalance, phase loss, thermal overload of windings, and low voltage.
 - 8. Unit Safeties: Shall be automatic reset and cause compressors to shut down if: high or low ambient, low leaving chilled liquid temperature, under voltage, and flow switch operation. Contractor shall provide flow switch and wiring per chiller manufacturer requirements.
 - 9. Alarm Contacts: High or low ambient, low leaving chilled liquid temperature, low voltage, low battery, and (per compressor circuit): high discharge pressure or temperature, low suction pressure, low or high motor current, low or high differential oil pressure, and high oil temperature.
 - E. Manufacturer shall provide any controls not listed above, necessary for automatic chiller operation. Mechanical Contractor shall provide field control wiring necessary to interface sensors to the chiller control system.
- 2.06 POWER CONNECTION and DISTRIBUTION**
- A. Power Panels:
1. NEMA 3R/12 (IP55) rain/dust tight, powder painted steel cabinets with hinged, latched, and gasket sealed outer doors equipped with wind struts for safer servicing. Provide main power connection(s), compressor and fan motor start contactors, current overloads, and factory wiring.

- 2. Field power supply wiring connections shall be to a single power center on the chiller, shall be 3 phase of scheduled voltage, and shall connect to terminal blocks per each of the two motor control panels. Separate disconnecting means and/or external branch circuit protection (by Contractor) required per applicable local or national codes.
 - 3. Provide two electrically separate, adjacent motor control center cabinets, with independent doors and separated by a steel panel, for compressor and fan motor power distribution components.
- B. Exposed compressor and fan motor power wiring shall be routed through liquid tight conduit.

2.07 ACCESSORIES and OPTIONS

Some accessories and options supercede standard product features. Your YORK representative will be pleased to provide assistance.

- A. Microprocessor controlled, Factory installed Wye-Delta compressor motor starters for reduced compressor inrush start current. Two-compressor machines with Single-Point Power connection and equipped with Star-Delta compressor motor start must also include factory provided circuit breakers in each motor control center. All 3 & 4 compressor machines equipped with Star-Delta compressor motor start must also include factory provided circuit breakers in each motor control center.

B. Power Supply Connections:

- 1. Two Compressor Machines –
 - a. Multiple Point with Individual System Circuit Breakers or Non-Fused Disconnect Switches: Two Field provided branch circuits shall connect to Individual System Circuit Breakers or Non-Fused Disconnects per compressor on each of the two motor control centers, with lockable external handles on doors in compliance with Article 440-14 of the N.E.C.
 - b. Single-Point Terminal Block or Non-fused Disconnect Switch: Field provided branch circuit shall connect to single-point Terminal Block or Non-Fused Disconnect with lockable external handle in compliance with N.E.C. Article 440-14, with Factory provided interconnecting wiring to (optional Individual System Circuit Breakers, and) compressor motor start components in each of two motor control center cabinets.
 - c. Single-Point Circuit Breaker: Field provided branch circuit shall connect to Single-Point Circuit Breaker with Lockable External Handle (in compliance with Article 440-14 of N.E.C.)

Guide Specifications (Continued)

- factory provided interconnecting wiring to compressor motor start components in each of two motor control center cabinets.
2. Three and Four Compressor Machines –
- Multiple Point power connection to Terminal Blocks or Non-Fused Disconnect Switches: Two Field provided branch circuits shall connect to factory provided Terminal Blocks or Non-Fused Disconnect Switches, with Lockable External Handle in compliance with Article 440-14 of N.E.C., with factory furnished interconnecting wiring to (optional Individual System Circuit Breakers with lockable external handles, and) compressor motor start components in each of the two motor control center cabinets.
 - Single-Point Terminal Block or Non-fused Disconnect Switch: Field provided branch circuit shall connect to Single-Point Terminal Block or Non-Fused Disconnect with lockable external handle in compliance with N.E.C. Article 440-14, with factory provided interconnecting wiring to Individual System Circuit Breakers and compressor motor start components in each of two motor control center cabinets.
- C. Control Power Terminal Strip: Provided in Microprocessor panel for field supplied 115V-1Ø control circuit power.
- D. Condenser Coil Environmental Protection:
- Black Fin: Epoxy coated aluminum fin stock to guard from corrosive agents and insulate against galvanic potential. For mild seashore or industrial locations.
 - Copper Fin: Provide copper fins in lieu of aluminum.
 - Phenolic Coating: Cured phenolic coating on condenser coils for seashore and other corrosive applications (with the exception of strong alkalis, oxidizers, and wet bromine, chlorine and fluorine in concentrations greater than 100ppm).
- E. Protective Chiller Panels (Factory-mounted):
- Louvered Panels (condenser coils only): Painted steel as per remainder of unit cabinet, over external condenser coil faces.
 - Wire Panels (full unit): Heavy gauge, welded wire-mesh, coated to resist corrosion, to protect condenser coils from incidental damage and restrict unauthorized access to internal components.
 - Louvered Panels (full unit): Painted steel as per remainder of unit cabinet, to protect condenser coils from incidental damage, visually screen internal components, and prevent unauthorized access to internal components.
4. Louvered/Wire Panels: Louvered steel panels on external condenser coil faces, painted as per remainder of unit cabinet. Heavy gauge, welded wire-mesh, coated to resist corrosion, around base of machine to restrict unauthorized access.
- F. Evaporator options:
- Provide 1-1/2" cooler insulation in lieu of standard 3/4".
 - Provide DX Cooler with 300 PSIG (20.7 bar) waterside design working pressure in lieu of standard 150 PSIG (10.3 bar).
 - Provide Raised Face Flanges for cooler nozzles:
 - 150 PSIG (10.3 bar), welded flanges (field kit, mate supplied).
 - 300 PSIG (20.7 bar), welded flanges (factory installed, no mate supplied).
 - 150 PSIG (10.3 bar), Victaulic™ Flanges (field kit, no mate supplied).
 - Provide Chiller in accordance with Pressure Safety codes in lieu of Standard ASME:
 - German TÜV construction.
 - French CODAP construction.
 - Italian ISPESL construction.
 - Polish UDT construction.
- G. Remote Cooler: Manufacturer shall provide separately: chiller less evaporator, evaporator, leaving and return water sensors, and liquid line components (solenoid valves, filter driers, sight glasses, and TXVs), as discrete elements of a complete factory system. Contractor shall field erect system and provide interconnecting refrigerant piping and wiring in accordance with Manufacturer recommendations, and project plans and schedules. Where not otherwise specified, Contractor provided system piping shall be in accordance with applicable sections of ASHRAE Handbook.
- H. Flow Switch (Field-mounted): Vapor proof SPDT, NEMA 4X switch (____150 PSIG (10.3 bar) or ____300 PSIG (20.7 bar)), -20°F to 250°F (-28.9°C to 121.1°C).
- I. High External Static Pressure Fans and Motors: Factory installed fans and motors for up to 0.4 inches of water (100Pa) external static pressure at nominal condenser air flow.
- J. Microprocessor Membrane Keypad Graphics on in lieu of Standard English:
- French language.
 - German language.
 - Spanish language.
 - Italian Language.

- K. Thermal Storage: Leaving chilled liquid setpoint range for charge cycle from 25°F to 15°F (13.9°C to 8.3°C) minimum, automatic reset setpoint range of 40°F to 50°F (22.2°C to 27.8°C).
- L. Low Temperature Process Brine: Leaving chilled liquid setpoint range 20°F to 50°F (11.1°C to 27.8°C) [optional range of 15°F to 20°F (8.3°C to 11.1°C)].
- M. Building Automation System (EMS) Reset Interface: Chiller to accept 4 to 20mA, 0 to 10 VDC, or discrete contact closure input to reset the leaving chilled liquid temperature, or percent full load amps (current limit).
- N. Remote Control Panel (Field-mounted): Auxiliary panel for remote user interface for functions normally made at the unit control center
- O. Multi-Unit Sequence Control (Field-mounted): Separate Sequencing control center provided to permit control of up to eight chillers in parallel based on mixed liquid temperature.
- P. Sound Reduction (Factory-mounted):
1. Low speed, reduced noise fans
 2. Acoustic Silencer Kit
- Q. Vibration Isolation (Field-mounted):
1. Neoprene Isolators.
 2. 1 Inch Deflection Spring Isolators: Level adjustable, spring and cage type isolators for mounting under the unit base rails.

3. 2 Inch Deflection Seismic Isolators: Level adjustable, restrained mounts in rugged welded steel housing with vertical and horizontal limit stops. Housings shall be designed to withstand a minimum 1.0g accelerated force in all directions to 2" (50.8 mm).

PART 3 — EXECUTION

3.01 INSTALLATION

- A. General: Rig and Install in full accordance with Manufacturer's requirements, Project drawings, and Contract documents.
- B. Location: Locate chiller as indicated on drawings, including cleaning and service maintenance clearance per Manufacturer instructions. Adjust and level chiller on support structure.
- C. Components: Installing Contractor shall provide and install all auxiliary devices and accessories for fully operational chiller.
- D. Electrical: Coordinate electrical requirements and connections for all power feeds with Electrical Contractor (Division 16).
- E. Controls: Coordinate all control requirements and connections with Controls Contractor.
- F. Finish: Installing Contractor shall paint damaged and abraded factory finish with touch-up paint matching factory finish.
